

Cannes Ecole Pagnol CM1 Mme Dubbiosi

PROBLEM : SNACK TIME.

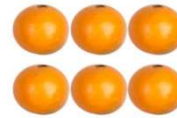

I buy **6 oranges**.

I invite **4 friends** to have a snack.

I cut the oranges **in 2**.

I'd like to prepare an **orange juice**.

I'd like to **share** the oranges **equally in 4 glasses**.

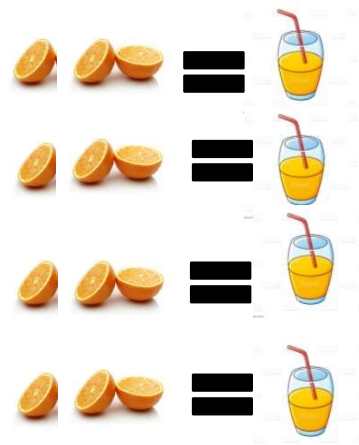

How many halves of oranges will I put in **each glass** ?

Use a drawing or a calculation to answer.

ANSWER.

$6 \times 2 = 12$ There are **12 halves** of oranges.

$12 : 4 = 3$ In **each glass**, I will put **3/2** of oranges.
